ALICE MOSQUE APP

Alice springs is a small town in the middle of Australia with a small Muslim community. There is only one mosque within thousands of kilometers. Alice Mosque app provides useful information to the Muslim community in Alice springs. The features are given below:

1. Registration:
   After filling out the information, the data can be used to contact the community for charity events and other recreational activities.
2. Prayer Timings:
   Prayer timing change frequently and are absolutely essential in the coming month of Ramadan when Muslims fast from dawn to dust based on 2 prayers. This app will provide up to date information about prayer timings.
3. Maps
   The map will provide the address and a visual picture about where the Alice mosque is located making it easy for locals as well as travelers to visit the mosque which otherwise is fairly difficult to find.
4. News
   Important news like dinners, charity events, community gatherings and other information such as imams visiting can now be shared via the app.
5. Privacy Policy
   The app explains the privacy policy for the use of the app since it is a free licence, and use as is software.

Being a php developer, in assignment 2 I will complete this app and deploy this for the Muslim community for free to use on the play store.
